

Pink INTIMATE System

Pink Intimate System is the ideal gentle, non-invasive cosmetic solution specifically designed by Promoitalia to improve the overall appearance of skin which looks visible brightened especially in the most delicate areas of the body. Younger looking skin allows each woman to feel more positive about their body, feeling more self-confident.

Pink Intimate System is recommended for improving the skin look in different areas including:

- Underarms
- Nipples
- Armpits
- Elbows
- Knees
- Neck
- Bikini area
- Inner thigh

Pink Intimate Cometic BENEFITS:

- Skin brightening
- Skin looks healthy
- Improves the quality of skin and relieves dryness by moisturizing
- Firming and visible looking-toning effect of the skin
- Healthy and radiant complexion

14 vials of 3 mL each, individually wrapped pouches including a dropper and instructions for use.

Pink Intimate System

The ideal solution for the delicate treatment of the female genital area

All organs of the body, including genitalia , are subject to a slow and gradual aging that leads to functional and structural changes.

The natural causes of aging are mainly concentrated in the vaginal tract, which is subjected to a general atrophy.

The modifications of the female genital parts occur gradually, mainly during the pre-menopausal period, from the age of 42 to the age of 50, and they increase more rapidly after this period due to the reduction of estrogen levels.

Vaginal aging

There are a number of factors that cause the vaginal lips, or labia, to sag and the vaginal muscles to weaken. During the aging process, the skin becomes less elastic. As the skin loses its natural collagen and fat, the labia become looser and are more prone to droop with gravity.

Fluctuations in weight, pregnancy, and vaginal childbirth, can all cause the muscles of the vaginal canal to stretch and weaken.

The pre-menopausal and menopausal periods mark the beginning of the process of vaginal (or vulvar) ageing: the sharp decrease of hormone levels leads to a gradual thinning of both the vulva and the vaginal walls, which brings about unpleasant effects such as vaginal dryness and pain during sexual intercourse

Vaginal aging

- Loss of tone
- Vaginal dryness
- Perineal muscular atrophy
- Loss of pubic hair
- Tissue thinning
- Loss of volume in the vaginal lips
- Clitoral involution

The current aesthetic medical solutions

All the problems described may be now partially solved using mostly invasive or extremely expensive medical treatments.

- Lipofilling
- Regeneration with PRP
- Filler
- Intravaginal laser
- Skin revitalization
- Thread “Vaginal Narrower”

More or less invasive treatments with sectoral results targeted at a specific blemish.

Promoitalia is leader in the aesthetic medical sector, it offers a new minimally invasive solution to lift and renew the skin in the vaginal area.

It is a valuable aid to alleviate, improve and solve the most common problems that arise, as years go by, in intimate areas of the body.

A real and specific anti-aging treatment for the vaginal area.

Quick and easy to use, it allows to quickly solve the most common beauty flaws of an area often difficult to treat.

Pink Intimate System

Pink intimate System is a solution composed of unique and efficient ingredients, mixed to guarantee an immediate effect:

Ingredients with a lifting and whitening action:

- Modulated chloroacetic acid
 - Urea peroxide
 - Kojic acid
 - Rucinolo
 - Glutathione

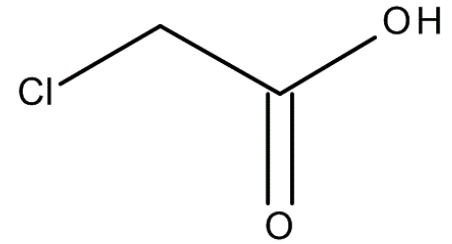

Regenerating, biostimulating and soothing ingredients:

- Papaine
- Gynesteine
- Retinol
- Bisabolol
- Glycyrrhiza Glabra Root Extract

*Ingredients
with a peeling,
whitening and lifting action*

Pink Intimate System

Ingredients with a lifting and whitening action:

Chloroacetic acid modulated with Urea Peroxide

Chloroacetic acid or MCA is a derivative of acetic acid, not much aggressive but very effective for treating skin blemishes.

Its chemical structure presents a hydrophilic / lipophilic balance, such as to reach the intermediate layers of the dermis.

MCA, if mixed with a suitable amount of urea peroxide, reduces its acidic characteristics and greatly increases its permeability.

The result is a mixture able to easily overcome the dermo-epidermal barrier without damaging it and reaching the medium-deep layers of the dermis in absolute safe way.

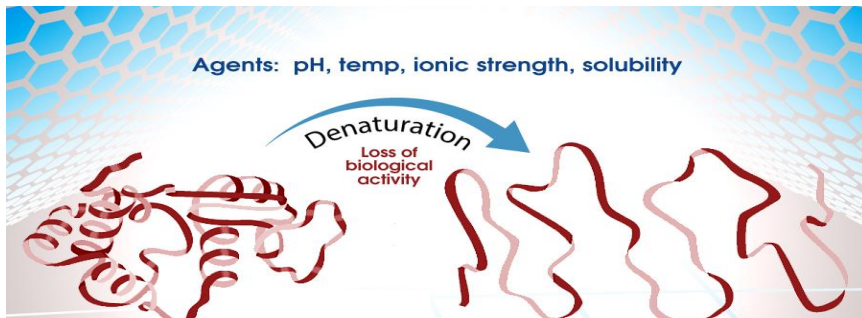

Pink Intimate System

Ingredients with a lifting and whitening action:

Chloroacetic acid modulated with Urea Peroxide

Once the mid-deep dermis is reached, the stabilization process is interrupted by cellular enzymes thus producing free and active MCA.

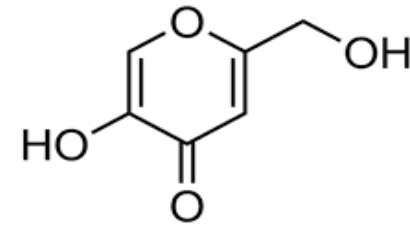

The final effect will be a controlled protein denaturation that will immediately determine a lifting effect in the tissue and stimulating effect on the fibroblast cells.

Pink Intimate System

Ingredients with a lifting and whitening action:

Kojic acid

Kojic acid

Kojic acid is an organic acid extracted from fermented rice particularly useful in the treatment of cutaneous hyperchromia and melanogestic hyperactivity.

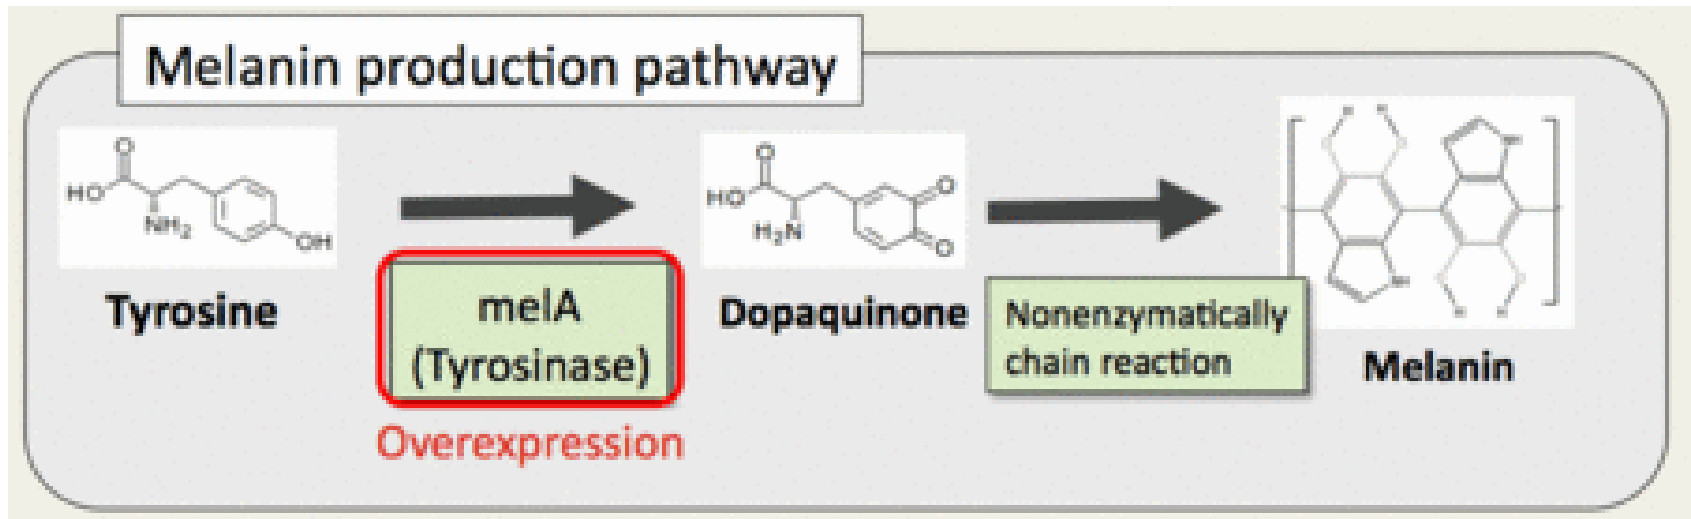

Kojic acid is in fact a false substrate of tyrosine hydroxylase, the enzyme can convert tyrosine into melanin in the melanogenesis process.

By blocking the enzyme the production of melanin reduces thus producing a whitening effect on the skin.

Its structure is also able to stabilize MCA by enhancing the penetration in the dermis.

Pink Intimate System

Biochemical process for the production of melanin

Pink Intimate System

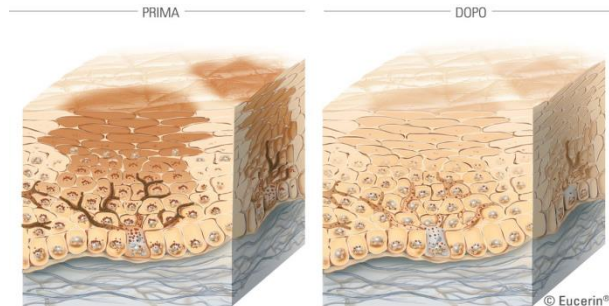

Ingredients with a lifting and whitening action:

Rucinol or B-resorcinol

Synthetic molecule capable of eliminating hyperpigmentation reducing the production of melanin.

Butyl Resorcinol is an inhibitor of tyrosinase, the enzyme that forms melanin. Differently from kojic acid, the ingredient blocks tyrosinase following a different reaction mechanism.

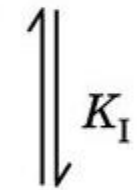

A study with a spot treatment demonstrated that B-Resorcinol is an ingredient effective to obtain brighter and more uniform skin, which acts on the source of production of melanin.

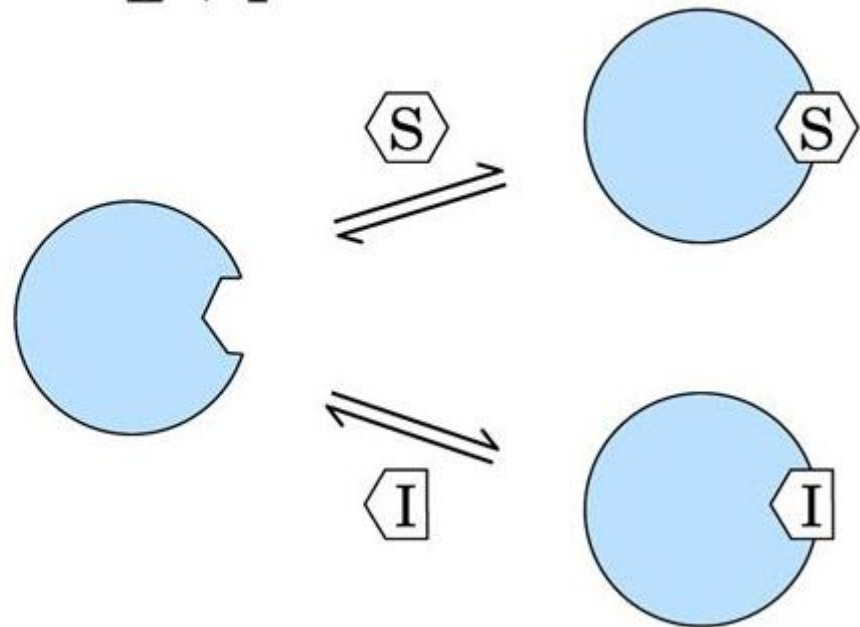

Rucinol: enzyme and false substrate

EI

Pink Intimate Solution

Ingredients for peeling, lifting and whitening action:

Glutathione

Glutathione is a tripeptide thiol with low molecular weight, which plays a primary role in maintaining the intracellular redox balance.

In addition to its remarkable antioxidant properties, the discovery of its antimelanogenic properties led to his promotion as lightening agent

Glutathione is present within the cells in a reduced form and plays a very important role in various physiological functions; studies claim that its whitening effects are the result of the direct and indirect inhibition of the enzyme tyrosinase, and the transition from eumelanin to pheomelanin

*Regenerating,
biostimulating and
soothing ingredients*

Pink Intimate Solution

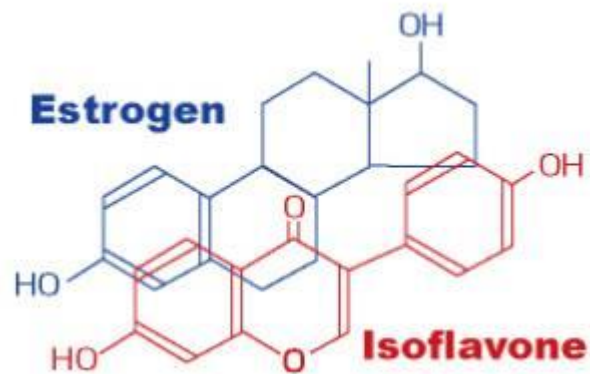

Regenerating, bio-stimulating and soothing ingredients

Genistein

Genistein is a phytohormone, extracted from soybeans with a variety of activities not only of metabolic type.

Its structure similar to estradiol is able to partially stimulate the cells whose growth depends on the hormone production (Estradiol-like effect), which is why the vaginal tissues are especially sensitive to its activities.

It stimulates fibroblasts and other dermal structures of the intimate area. Genistein has scavenger properties, is a powerful antioxidant, reduces lipid peroxidation and protects DNA from damage.

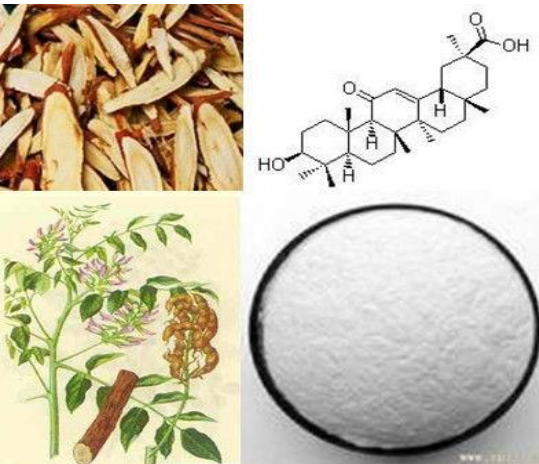

Pink Intimate System

Regenerating, biostimulating and soothing ingredients

Glycyrrhiza Glabra Root Extract

Glycyrrhetic acid is a derivative of the roots of the Chinese licorice plant - *Glycyrrhiza glabra*, and it is known for its anti-oxidant and anti-inflammatory properties. It has also been demonstrated that it favors the restoration of DNA of skin that has been damaged by UV rays.

Licorice extract has cortisone-like effects by reducing inflammation and restoring the proper dermal-epidermal balance.

Pink Intimate System

Regenerating, biostimulating and soothing ingredients

Bisabolol

It is a completely vegetable component derived from the distillation of essential oil of *Vanillosmopsis Erythropoppa*, a kind of chamomile.

It has healing and anti-inflammatory properties. An effective soothing ingredients against irritations.

Thanks to its properties, this ingredient is used in products intended for sensitive skin, skin suffering from atopic dermatitis, seborrheic skin and irritations in general.

Pink Intimate System

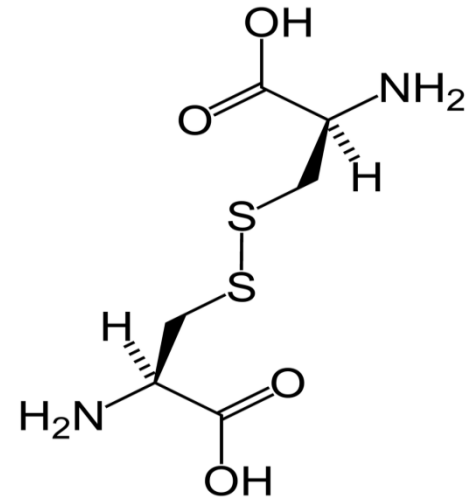

Regenerating, biostimulating and soothing ingredients

Papaine

Papain is a proteolytic enzyme extremely effective in delaying the growth of hair and for improving skin quality and texture.

Its proteolytic activity slows down the aggregation of keratin filaments by reducing the growth of hair and weakening the metabolic activity of the bulb.

Papain also has a light exfoliation and whitening action, an action however not directed on the metabolim of the melanin pigment but only on its rate of elimination.

Pink Intimate System

Regenerating, biostimulating and soothing ingredients

Retinol

Retinol is a photosensitive molecule extremely effective in promoting cell synthesis and replication.

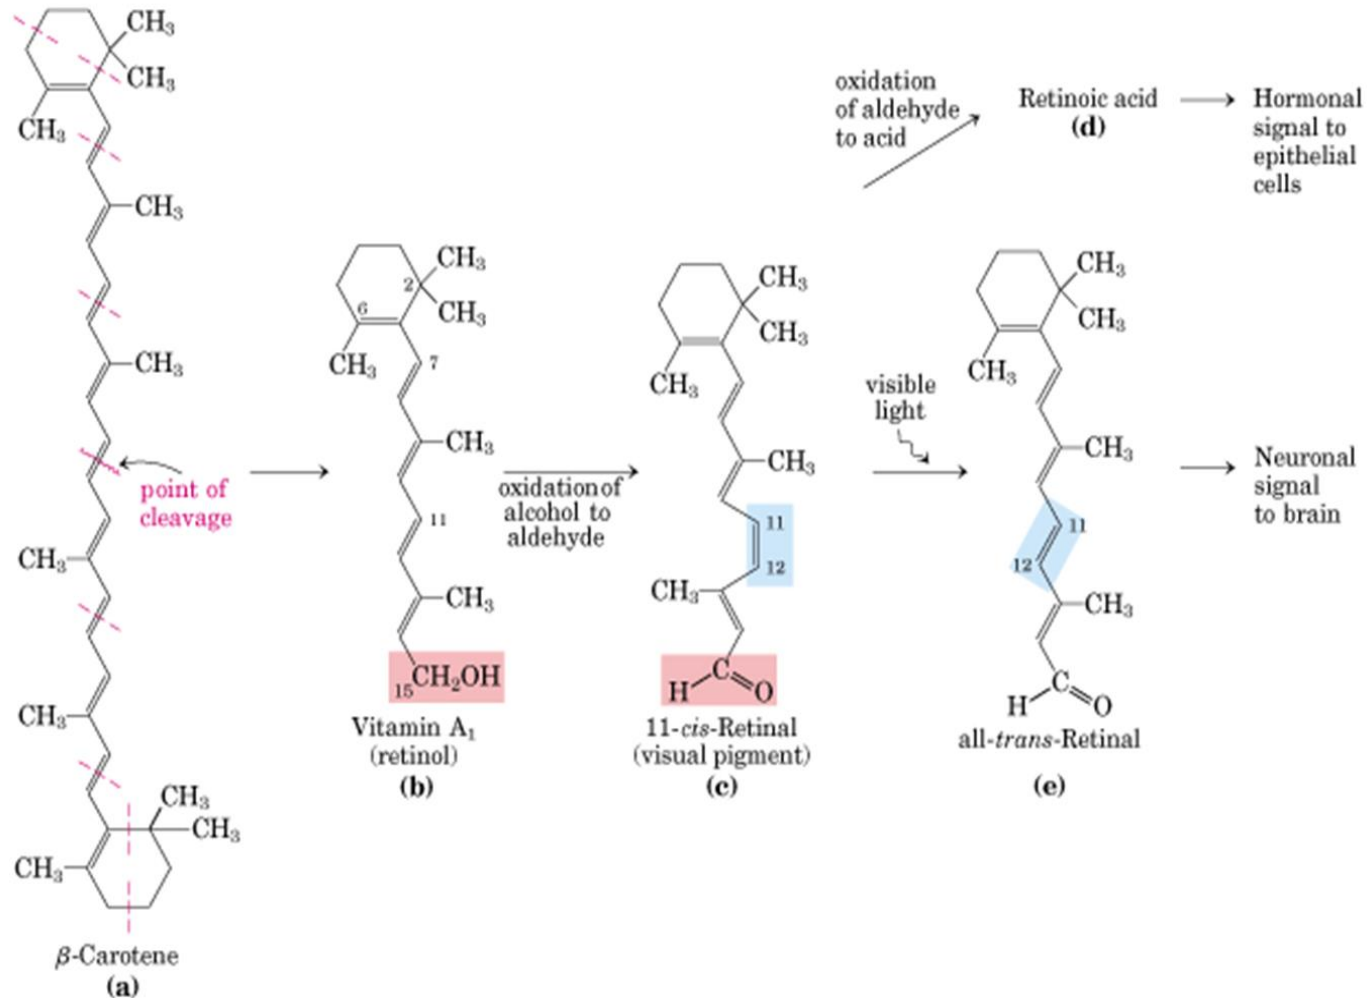

Its structure allows it to get directly into the cell and carry out its action at the nuclear level.

Another very important function of this ingredient is to promote collagen release at the dermal level.

The action of retinol is widely documented in the scientific field and its benefits on the dermal level are well known.

Storage of retinol-based products must be realized in dark containers able to shield solar rays. Heat sources could nullify its effects.

Pink Intimate System

Retinol and its active metabolites

Pink Intimate Solution

Regenerating, bio-stimulating and soothing ingredients

Cobalamin or vitamin B 12

Vitamin B12, or cobalamin, is an essential vitamin in the processes of formation of red blood cells and cells of the nervous system. Together with the folic acid, another B group vitamin, it supports the synthesis of DNA and RNA.

In nature it is produced by certain bacteria. This is the most complex among the eight types of B vitamins and is water-soluble.

It's a unique product, as :

- It targets the most common flaws of the vaginal area
- It gives an immediate lifting result
- It reduces hair growth
- It gives a whitening result
- It gives a de-reddening and soothing result
- It gives a non-traumatic revitalizing result

Indications:

- Treatment of vaginal laxity
- Treatment of perianal laxity
- Atraumatic biorevitalization of the vaginal area
- Inguinal area whitening
- Whitening of the mons pubis and labia majora
- Whitening of nipples
- Whitening of armpits

Pink Intimate System, thanks to its delicate but effective formulation, can also be used for treating areas other than the genital area.

In particular, its formulation has proved to be very useful in the treatment of the underarm and inguinal area and for whitening the area of the nipple.

Precautions for use

- The sensation of a slight tingling, felt at the first application must limit the number of applications over the same area
- The sensation of an intense burning limits the execution of the procedure (meaning the skin is irritated)
- Do not undergo the treatment before a week after the previous one
- Do not treat immediately after shaving (minimum 2 days after)
- Protect the mucosa

*The pink that
rejuvenates*

PROMOITALIA
MEDICAL AESTHETICS

*pink*INTIMATE *system*

*Every woman should feel good about her body
even more with her private parts*

Pink Intimate System is the ideal non-invasive solution to regain the youthfulness and firmness, lost over the years, of external vaginal tissues.

This innovative system is the first peel that lifts, whitens and rejuvenates the intimate areas allowing each woman to feel more positive about her body, not only improving self-confidence but also improving intimacy during intercourse.

Pink Intimate System: the solution
A delicate mixture containing:

- *stabilized monochloroacetic acid to lift and rejuvenate the tissue in a non-traumatic way without irritation*
- *enhanced kojic acid to whiten tissues in depth*
- *nutrient and biostimulating factors to reactivate natural regeneration processes*
- *bisabolol and glycyrrhetic acid to soften and reduce physiological irritations*

Pink Intimate System is safe and effective and results are guaranteed after simply applying the product during one session. It doesn't require any special precautions for use and the procedure is quick and gentle.

Pink Intimate System may be used on the following body areas:

- *mons pubis*
- *labia majora*
- *perianal region (whitening)*
- *inguinal area (whitening)*
